Viktor Mooren

viktorm@berkeley.edu | Berkeley, CA | linkedin.com/in/viktor-mooren/ | github.com/Careful-Zebra | viktormooren.com

EDUCATION

University of California, Berkeley May 2026
Bachelor's Degree in Computer Science, Minor in Philosophy, GPA: 3.5

Relevant Coursework: Efficient Algorithms and Intractable Problems, Discrete Math and Probability Theory, Computer Graphics, Machine Learning, Artificial Intelligence, Computer Security, Internet Architecture, Linear Algebra

PROJECTS

Tennis Scorer, Wear OS App | *Kotlin, Jetpack Compose, Android Studio*
- Built a native Wear OS app for the Pixel Watch 2 that tracks live tennis scoring (points, games, sets, tiebreaks) through a self-contained Kotlin state machine
- Designed a tap-based Jetpack Compose interface for one-handed, glanceable use mid-match, including a one-tap undo for mis-taps
- Configured the app for standalone operation (no paired phone required) and deployed it to physical hardware over Wi-Fi debugging

CS61C Parallel Convolution Optimization | *C, AVX SIMD, OpenMP, Open MPI*
- Optimized a 2D convolution kernel with AVX SIMD intrinsics and OpenMP multithreading, then scaled it across multiple nodes with Open MPI
- Profiled and resolved memory alignment and cache locality bottlenecks limiting throughput on large kernels

OVRdle | *ovrdle.com* **|** *JavaScript, AWS Amplify*
- Built and launched a daily browser puzzle game where players guess the overall ratings of five footballers, one from each of the last five FIFA/EA FC editions
- Wrote the game in dependency-free vanilla JavaScript and deployed it on AWS Amplify under a custom domain, with continuous deployment from GitHub
- Have run the game live since September 2026, shipping a new puzzle daily to a recurring base of 5 daily players

WORK EXPERIENCE

Diligent Staffing Inc Remote
Software Developer (Part-Time) October 2026 to Present
- Building a custom WordPress plugin in PHP that gives the company's employer clients a secure portal to log in, view pending and past invoices, and pay one or several at once through Authorize.net
- Scoped requirements directly with company leadership, designing the portal around QuickBooks as the source of truth to avoid double entry across the company's incoming payment methods

Game Design and Development at Berkeley Berkeley, CA
Facilitator August 2024 to May 2026
- Designed and implemented Unity 6 programming assignments covering advanced C# scripting, coroutines and linear interpolation
- Delivered lectures on level design, game design principles and debugging, rated 9.1/10 by 45 students
- Mentored 4 student teams through the full Unity development lifecycle from prototype to final showcase

UC Berkeley Student Union Berkeley, CA
Building Operations Assistant January 2023 to May 2026
- Promoted 3 times (BOA1 to BOA4) within two years; supervised 90+ student employees, coordinated recruitment, and led operational training initiatives
- Coded a user-friendly Python system for various scheduling problems including meeting and shift planning, cutting time spent manually reviewing availability by ⅓

Brightminded Ltd Brighton, UK
Software Testing Intern June 2022 to August 2022, May 2023 to August 2023
- Designed and executed Cucumber test plans across multiple web-based features; identified critical bugs prior to production release

SKILLS

Coding Languages: Python, Go, Ruby, Java, JavaScript, Kotlin, C, C#, C++, Scheme, SQL, PHP
Tools: Git, Bash, Django, PostgreSQL, AWS Amplify, Docker, Claude Code, NumPy, Pandas, Unity, WordPress
Languages: Dutch & English (Fluent), Spanish, German, Norwegian (Intermediate)
