

Viktor Mooren

viktorm@berkeley.edu | Berkeley, CA | [linkedin.com/in/viktor-mooren/](https://www.linkedin.com/in/viktor-mooren/) | github.com/Careful-Zebra

EDUCATION

University of California, Berkeley

May 2026

Bachelor's Degree in Computer Science, Minor in Philosophy, GPA: 3.5

Relevant Coursework: Efficient Algorithms and Intractable Problems, Discrete Math and Probability Theory, Computer Graphics, Machine Learning, Artificial Intelligence, Computer Security, Internet Architecture, Linear Algebra

PROJECTS

Tennis Scorer, Wear OS App | Kotlin, Jetpack Compose, Android Studio

- Built a native Wear OS app for the Pixel Watch 2 that tracks live tennis scoring (points, games, sets, tiebreaks) through a self-contained Kotlin state machine
- Designed a tap-based Jetpack Compose interface for one-handed, glanceable use mid-match, including a one-tap undo for mis-taps
- Configured the app for standalone operation (no paired phone required) and deployed it to physical hardware over Wi-Fi debugging

CS61C Parallel Convolution Optimization | C, AVX SIMD, OpenMP, Open MPI

- Optimized a 2D convolution kernel with AVX SIMD intrinsics and OpenMP multithreading, then scaled it across multiple nodes with Open MPI
- Profiled and resolved memory alignment and cache locality bottlenecks limiting throughput on large kernels

Ranker | React, JavaScript, Vite, AWS Amplify

- Built a client-side ranking web app with six interchangeable ranking methods (1-10 scale, ordered list, tier list, weighted pie, head-to-head, and a 2D grid) sharing one data model and comparison pipeline
- Designed a sharing system that serializes and compresses ranking state directly into the URL, letting two users rank the same items and compare results with no server or database
- Implemented a custom pointer events drag and drop system and a pie weight balancing algorithm; deployed to AWS Amplify with CI/CD in a roughly 62KB gzipped bundle

WORK EXPERIENCE

Game Design and Development at Berkeley

Berkeley, CA

Facilitator

August 2024 – May 2026

- Designed and implemented Unity 6 programming assignments covering advanced C# scripting and coroutines and linear interpolation
- Gave detailed lectures on topics such as tutorial / level design, game design principles, aims and best practices for debugging. These lectures averaged a 9.1/10 rating by 45 enrolled students
- Supervised and mentored 4 student teams through full Unity development lifecycle from prototype to final showcase

UC Berkeley Student Union

Berkeley, CA

Building Operations Assistant

January 2023 - May 2026

- Promoted 3 times (BOA1 to BOA4) within two years; supervised 90+ student employees, coordinated recruitment, and led operational training initiatives
- Spearheaded the changing of an outdated paper-based 4 location storage system to a dynamic Microsoft Excel based system, reducing item search time by 50%
- Coded a user-friendly Python system for various scheduling problems including meeting and shift planning, cut time spent manually reviewing availability by 1/3

Brightminded Ltd

Brighton, UK

Software Testing Intern

June 2022 – August 2022, May 2023 – August 2023

- Designed and executed Cucumber test plans across multiple web-based features; identified critical bugs prior to production release
- Gained hands-on experience with how software solutions are developed to fit clients' needs

SKILLS

Coding Languages: Python, Go, Ruby, Java, JavaScript, C, C#, C++, Scheme, SQL

Tools: Git, Bash, Django, PostgreSQL, AWS Amplify, Docker, Claude Code, Kotlin, NumPy, Pandas, Unity

Languages: Dutch & English (Fluent), Spanish, German, Norwegian, (Intermediate)
